In this study, the authors prospectively compared aneuploid rates in embryos obtained from stimulated cycles to those of embryos obtained from unstimulated cycles in the same women. However, in Ovarian Stimulation was reported that even in unstimulated cycles Split daily recombinant human LH dose in hypogonadotropic hypogonadism:

Injectable fertility medications are more likely to cause OHSS than is treatment with oral medications. The first is used for women who are not ovulating spontaneously irregular or infrequent menstruation. This is most easily achieved by injections of gonadotropins. Some women who use injectable fertility drugs get a mild form of OHSS, which goes away on its own. American Medical Association.
