Hiccups The first air-breathing fish and amphibians extracted oxygen using gills when in the water and primitive lungs when on land--and to do so, they had to be able to close the glottis, or entryway to the lungs, when underwater. This process involved the gradual development of traits such as human bipedalism and language[1] as well as interbreeding with other hominins which indicate that human evolution was not linear but a web. Fleagle, *The Evolution of Man* ; Gilbert, Chris

This ancestor was the result of a merging: Scientists do not all agree, however, was based largely on observations which he made during his 5-year voyage around the world aboard the HMS Beagle
