American Journal of Agricultural Economics 91 5: New  
techniques to ensure food safety have emerged to deal with  
many of these problems, including genetic engineering of  
plants and animals to be resistant to disease; the radiation  
of food products to kill bacteria; the development of new food  
products, such as artificial sweeteners and fat substitutes;  
and eating only organic foods.

All instructor resources are now available on our Instructor Hub.  
Consumers While the food industry—from the farm to the  
retailer—plays an essential part in mitigating the risks from  
foods, consumers also play a role in reducing their risks from  
food through appropriate food purchases and handling Nauta et  
al. These developments continue to be important today, but  
many others affecting food safety have occurred in the decade  
since that report was published. Tabletop discussions, 22  
public forums, and consultations with scientists and advocacy  
groups on critical decisions would enable the agency to  
anticipate new needs and reactions to new activities and adapt  
appropriately. Advances in Food Toxicology. Occasionally, funds  
are earmarked for various activities or offices by Congress.
