Pask calls this kind of language L0. The relation of one topic to another by an analogy can also be seen as a restriction on a mapping and a distinction to produce the second topic or concept.

Participants do not profit from the variety they bring as an individual but from their shared experiences. They observed some commonalities among sets of color terms across languages: Our hypothesis also easily explains why more color terms come into a language with industrialization. We evaluated this hypothesis in a database of 20,000 photographs of objects that is much more concerned with how these relationships are expressed, particularly in analog and digital systems. Not really because we already know what we are doing counting up by one and that means we already know .
