The finding that there was no statistical difference between case studies in terms of performance on examination questions suggests that case studies are equally effective at promoting learning of disparate topics in biology. Positive point differences indicate how much higher the mean scores on case study-related questions were than the mean scores on paired control questions. It is therefore important to determine whether case studies published by instructors who are unaffiliated with a particular course can be used effectively and obviate the need for each instructor to develop new case studies for their own courses.

Author manuscript; available in PMC September 2017. Teaching science with case studies: However, this goal likely will require substantial changes to teacher preparation programs and curriculum materials, as well as new policies around teacher recruitment, evaluation, and development. National Bureau for Economic Research; Case studies positively affect student perceptions of learning gains about studies positively affect student perceptions of learning gains about various biological topics. However, the existing body of literature lacks direct evidence that the case study method is an effective tool for teaching about this collection of important topics in biology courses.
